

YOUR SOIL'S FAVORITE APP IS GETTING BETTER

We agree with the old saying, "If it ain't broke, don't fix it," but after 10 years, it's time anyway. Expect to see an update to Soil Test Pro starting **Wednesday 14th October**.

Soil Test Pro has a new look that's more than screen deep. Navigating the app is now similar to navigating the Web Headquarters, just on a smaller scale. Soil Test Pro is faster than ever and has been upgraded with cool new features that make it even easier to use.

When the new update is available - please update! If you are using the old version and try to sync, you will be asked to update. You can choose to continue using the old version, but you will not be able to sync until you update. Update as soon as you can!

Check out some of our favourite new features down below:

LAB TEST & PRICING

By popular demand, you can now select labs and test to see the pricing of each job in the app.

MOVEABLE POINTS

When building a soil sample job, move, add, and delete individual points on your sampling map to better represent your field.

AUTO SYNC

You might forget to sync, but Soil Test Pro won't.
